# Industrial Ethernet

One network, all options

The Industrial Ethernet network portfolio from Phoenix Contact

Phoenix Contact provides end-to-end networking from the field to the control level. Reliable solutions with Industrial Ethernet, the latest wireless technologies, and cybersecurity increase the availability and security of your automation infrastructure.

With our many years of experience in automation technology, we know the challenges you face and can support you with network planning and commissioning. Get to know our products and solutions.

Solutions

Networked production

Efficient production requires well structured, high-performance, and secure network infrastructure. The ideal concept and the right components protect your system against automation system failures and costly downtimes. With industrial network products from Phoenix Contact, you can easily implement the high requirements of your production network in a future-proof manner. As well as the appropriate products, we also provide support for the optimum planning of your production network.

Network management

Solutions for the production network

Network management

Large production networks include many different network components that all have to be configured and diagnosed. Phoenix Contact managed switches, WLAN components, and security appliances can be easily started up using network management software. You can centrally assign IP addresses for network devices, configure several devices at the same time, and update the firmware.

Network management with the FL Network Manager software

High-performance and failsafe connection to the company network

The Virtual Router Redundancy Protocol (VRRP) allows you to redundantly connect your routers to the company network. Gigabit performance ensures high data throughput, while support of IT standards provides seamless integration (such as VLAN, SNMP, RSTP). For consistent communication between up to 28 different IP subnetworks, you can use the Layer-3 function.

Subnet 1

Subnet 2
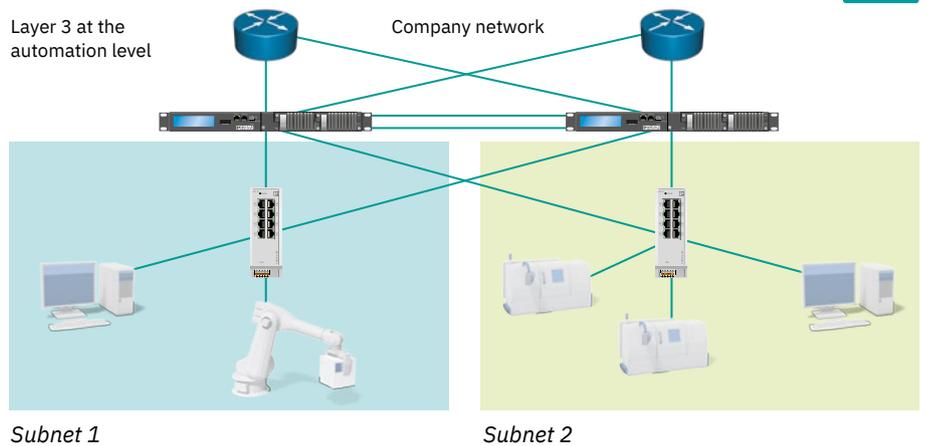

Integration of machines with the same IP address

Machines and their devices use fixed IP addresses. Therefore, address conflicts can occur during integration into overlapping networks. However, a complex adaptation of the IPs is not necessary. Our NAT switches and mGuard routers simply translate the internal address ranges of the machine into the desired IP range of the automation network.

> More information on NAT switches starting on page 28 and on mGuard security routers starting on page 58

High network availability due to network redundancy

Fast redundancy switch-over ensures the uninterrupted operation of automation networks in the event of connection failure. We offer:

- DLR (Device Level Ring) for EtherNet/IP™ networks
- MRP (Media Redundancy Protocol) for PROFINET networks
- RSTP (Rapid Spanning Tree Protocol) for standard industrial IT networks
- ERR (Extended Ring Redundancy)

If an error occurs, the network structure is reorganized so that all devices can be reached again

Reliable WLAN communication for cellular systems

With optimized roaming and MIMO technology, the WLAN products from Phoenix Contact enable fast cell changes in the millisecond range. This means that real-time communication between the control system and the automated guided vehicle system remains stable even when there is a high volume of data. With support for the current Wi-Fi 6/6E standard, the WLAN modules enable efficient use of the frequency spectrum and particularly high data rates.

Networked machine

Today, modern production machines are often networked in various ways. Whether with the Internet for remote maintenance, the company network for exchanging production data, or with other machines for automated production. However, greater networking also means larger networks, more communication and increasing security requirements. Phoenix Contact provides industrial Ethernet solutions for machine networks that meet both current and future requirements.

Secure integration into the production network

Machine connection via an NAT or security router enables transparent communication and protects the machine network against unwanted communication at the same time. Faults and threats from the production network are effectively kept away from the machine network. The availability and real-time capability of internal machine communication is thus ensured.

WLAN control via REST API

Our WLAN modules with REST API enable seamless integration into your applications. The standardized HTTP interface can be used to automate configurations, integrate status data into dashboards, and execute control commands directly from your application. This gives you full control, simplifies monitoring, and optimizes processes for maximum efficiency and flexibility.

> More information on Industrial WLAN starting on page 54

Full control for machine programming
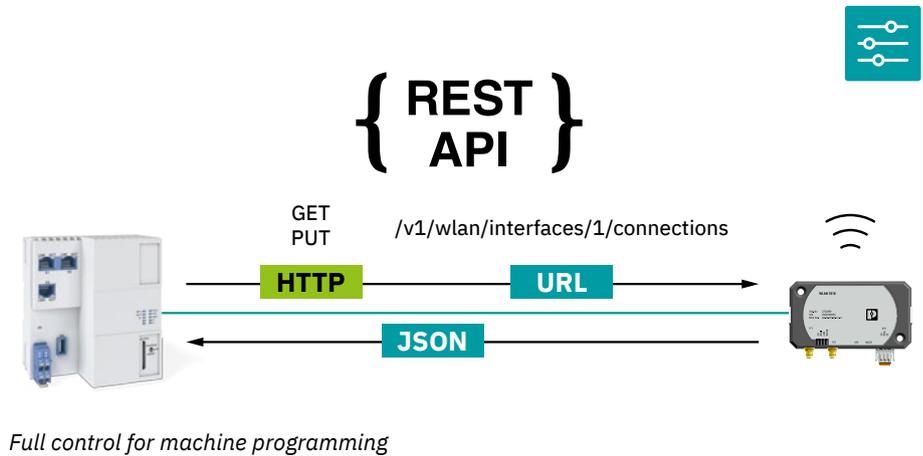

Real-time-capable control network

Automation switches combine IT functions with managed and real-time properties which optimally support the PROFINET and EtherNet/IP™ protocols. They ensure stable and real-time-capable communication.

The integrated, fast redundancy methods, such as the Device Level Ring (DLR) for EtherNet/IP™ and the Media Redundancy Protocol (MRP) for PROFINET, prevent the control process from being adversely affected even in the case of device failure.

> More information on managed automation switches starting on page 28

MRP redundancy for a failsafe machine network
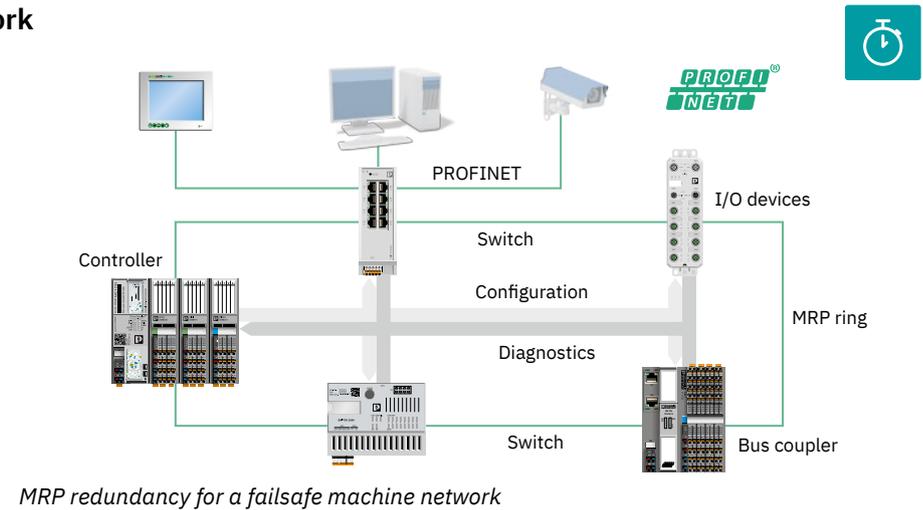

Integration of sensors and field devices

The managed switches for Single Pair Ethernet (SPE) from Phoenix Contact enable you to integrated sensors and field devices with an SPE interface directly into the existing Ethernet network. Additional gateways or subsystems are no longer required. Data is transmitted via just one pair of wires, which saves space – at the same time, power can be supplied to the connected devices via PoDL (Power over Data Line).

> More information on managed switches for state-of-the-art communication technologies starting on page 30.

With SPE, Ethernet can be used right through to the field level

Solutions
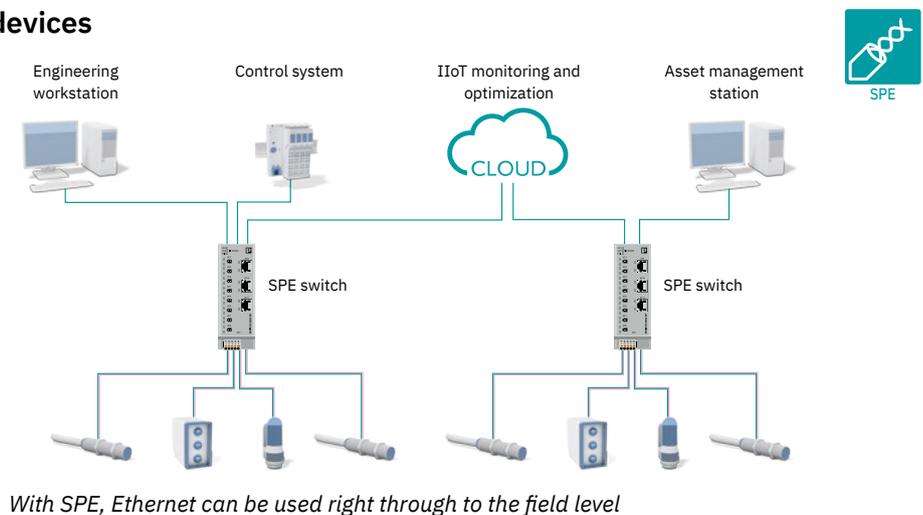

Networked infrastructure

In today's industry, virtually all trades are networked via Ethernet. High demands are placed on the network infrastructure and network components used. Reliable availability, support for specific protocols, long ranges, and robust functionality under demanding conditions are essential. Protection against attacks and manipulation is particularly important. Phoenix Contact provides secure and powerful network components for your systems.

Cost-effective networking of large IP networks

Solutions for infrastructure networks

Power over Ethernet

With Power over Ethernet (PoE), data and power are transmitted via the same standard Ethernet cable. This considerably reduces the cabling effort for the network devices installed in the field, such as surveillance cameras or WLAN access points. PoE is standardized in IEEE 802.3 and thus non-proprietary use is supported. With PoE splitters, you can also supply standard Ethernet devices with power via PoE.

Ethernet communication up to 20 km using any 2-wire cables

With the Ethernet extenders, not only can you connect simple point-to-point Ethernet applications, but also large IP networks over distances of up to 20 km.

Thanks to managed Ethernet extenders, unmanaged Ethernet extenders can now also be diagnosed centrally via IP. The system generates a warning via SNMP when unexpected events occur, such as path weakening.

Networked wind turbine generators

With the WDM method, two different wavelengths (1310/1550 nm) enable simultaneous data transmission without any loss of quality or bandwidth. This means that interference-free full duplex communication is possible in rotating applications. Double redundancy can be established via the copper slip ring using SHDSL technology and two Ethernet extenders.

> More information on WDM products starting on page 28 and on modems starting on page 63
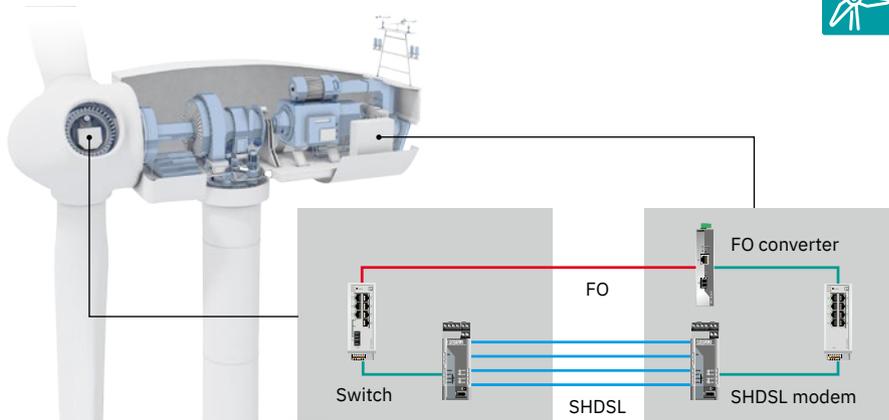

Redundant communication solution for secure data transmission to the hub

Demanding environments

For energy and infrastructure applications, network components have to withstand extreme conditions. The raptor switches from Phoenix Contact comply with IEC 61850 and IEEE 1613 and feature particularly high resistance to interference, temperatures from -40 to +85°C, as well as shock and vibration.

> More information on robust managed switches starting on page 32
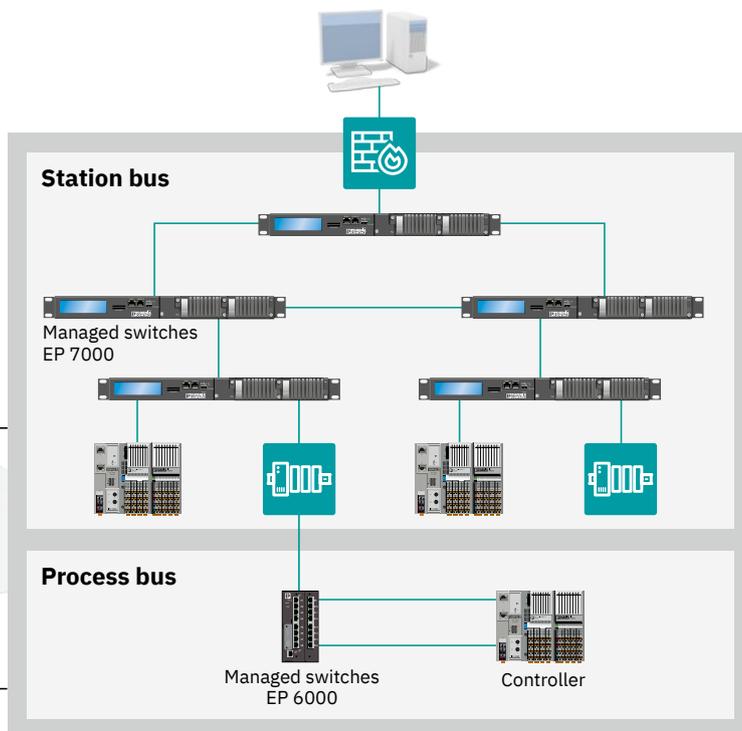

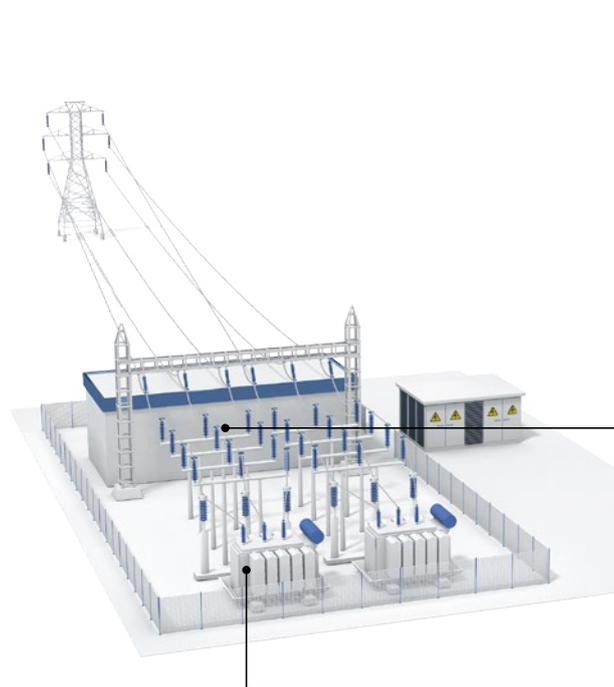

Raptor switches have been developed for use in substations

Solutions

Networked process plant

Transparent communication from the sensor to the control room is a prerequisite for optimum control of continuous processes in process engineering plants. Robust, high-availability, and secure Ethernet networks are therefore the basis for communication in modern process plants. Secure protection against unauthorized access by people or malware is a must. Phoenix Contact offers industrial Ethernet solutions and components for high-performance and secure networking of process plants.

Solution to IP address conflicts

Modular system components have permanently configured IP addresses. Conflicts can arise during integration into overlapping networks. Instead of laboriously adapting the IP addresses, NAT switches and mGuard routers simply translate the internal address ranges into the desired range of the automation network.

> More information on NAT switches starting on page 28 and on mGuard security routers starting on page 58
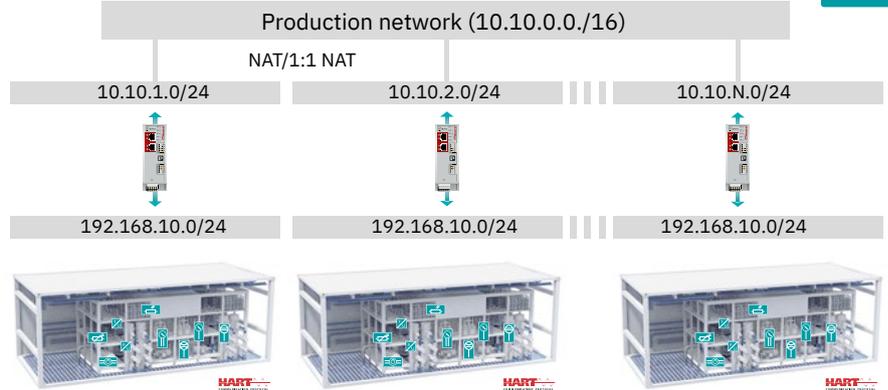

Access to system parts with the same IP addresses, thanks to 1:1 NAT function

Rapid Spanning Tree for high-availability systems

RSTP is a standardized redundancy method (IEEE 802.1D-2004) which is supported by virtually all managed switches from Phoenix Contact. The redundancy method supports ring and tree topologies and meshed networks. Special extensions include Fast Ring Detection for faster switching times and Large Tree Support for networks with up to 57 devices.

> More information on managed switches starting on page 28
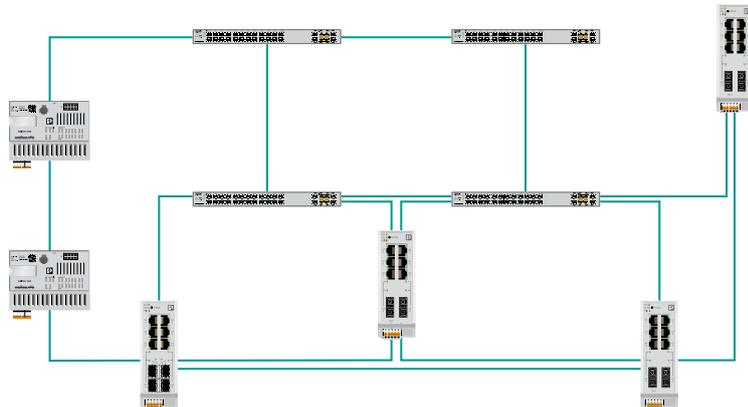

RSTP redundancy for high network availability

Cybersecurity

The mGuard firewall routers securely protect your network against the many dangers associated with increased networking. Reliably protect your system parts against unauthorized access by using secure VPN connections with an integrated firewall. The central management software enables the configuration, maintenance, and administration of a large number of installed mGuard firewall routers.

> More information on mGuard security routers starting on page 58
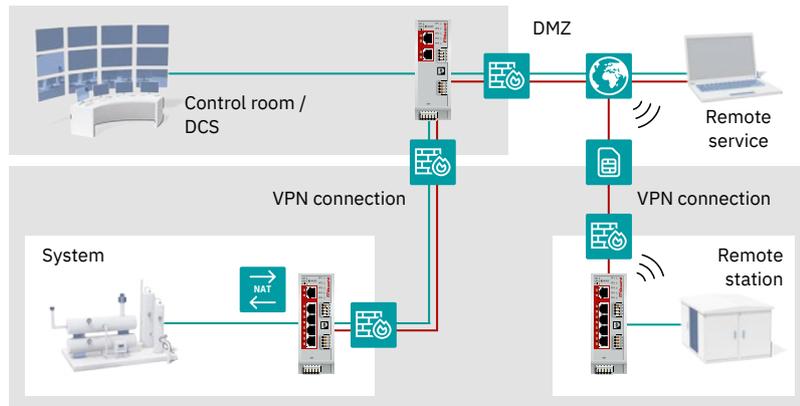

Protection of process plants with mGuard technology

Remote communication

Various communication methods are available for data transmission in remote or large networks and for monitoring systems all over the world. Communicate wirelessly at high speed via cellular networks. Access remote network devices via the telephone network, which is available worldwide, or use two-wire in-house cables for transmission speeds of up to 30 Mbps.

Utilization of HART data

Ethernet HART multiplexers are an easy and cost-effective option for converting HART signals into Ethernet-based protocols. You can connect up to 40 HART devices via your own HART master. This enables communication at Ethernet speed. The modular design provides a scalable solution for modern distributed control systems and phased roll-outs.

HART multiplexers can also be easily retrofitted in existing systems

Integration of APL field devices

Ethernet-APL enables the direct two-wire Ethernet connection of sensors and field devices in hazardous areas. With Ethernet-APL switches from Phoenix Contact, you can integrate APL devices seamlessly into existing networks and access field data directly. The technology features a range of up to 1,000 m at 10 Mbps and meets explosion protection requirements.

How to set up your network reliably

Whether for factory, infrastructure, or process industry applications – you need the right network concept and the right components for a highly productive system. Starting with a high-performance and secure connection to the company network, through redundant, failsafe connections for critical applications, to firewalls and solutions for communication with remote locations, you will find the right solution for your network at Phoenix Contact. We will be happy to advise you on how best to set up your network and which components you will need for this.

HART gateway
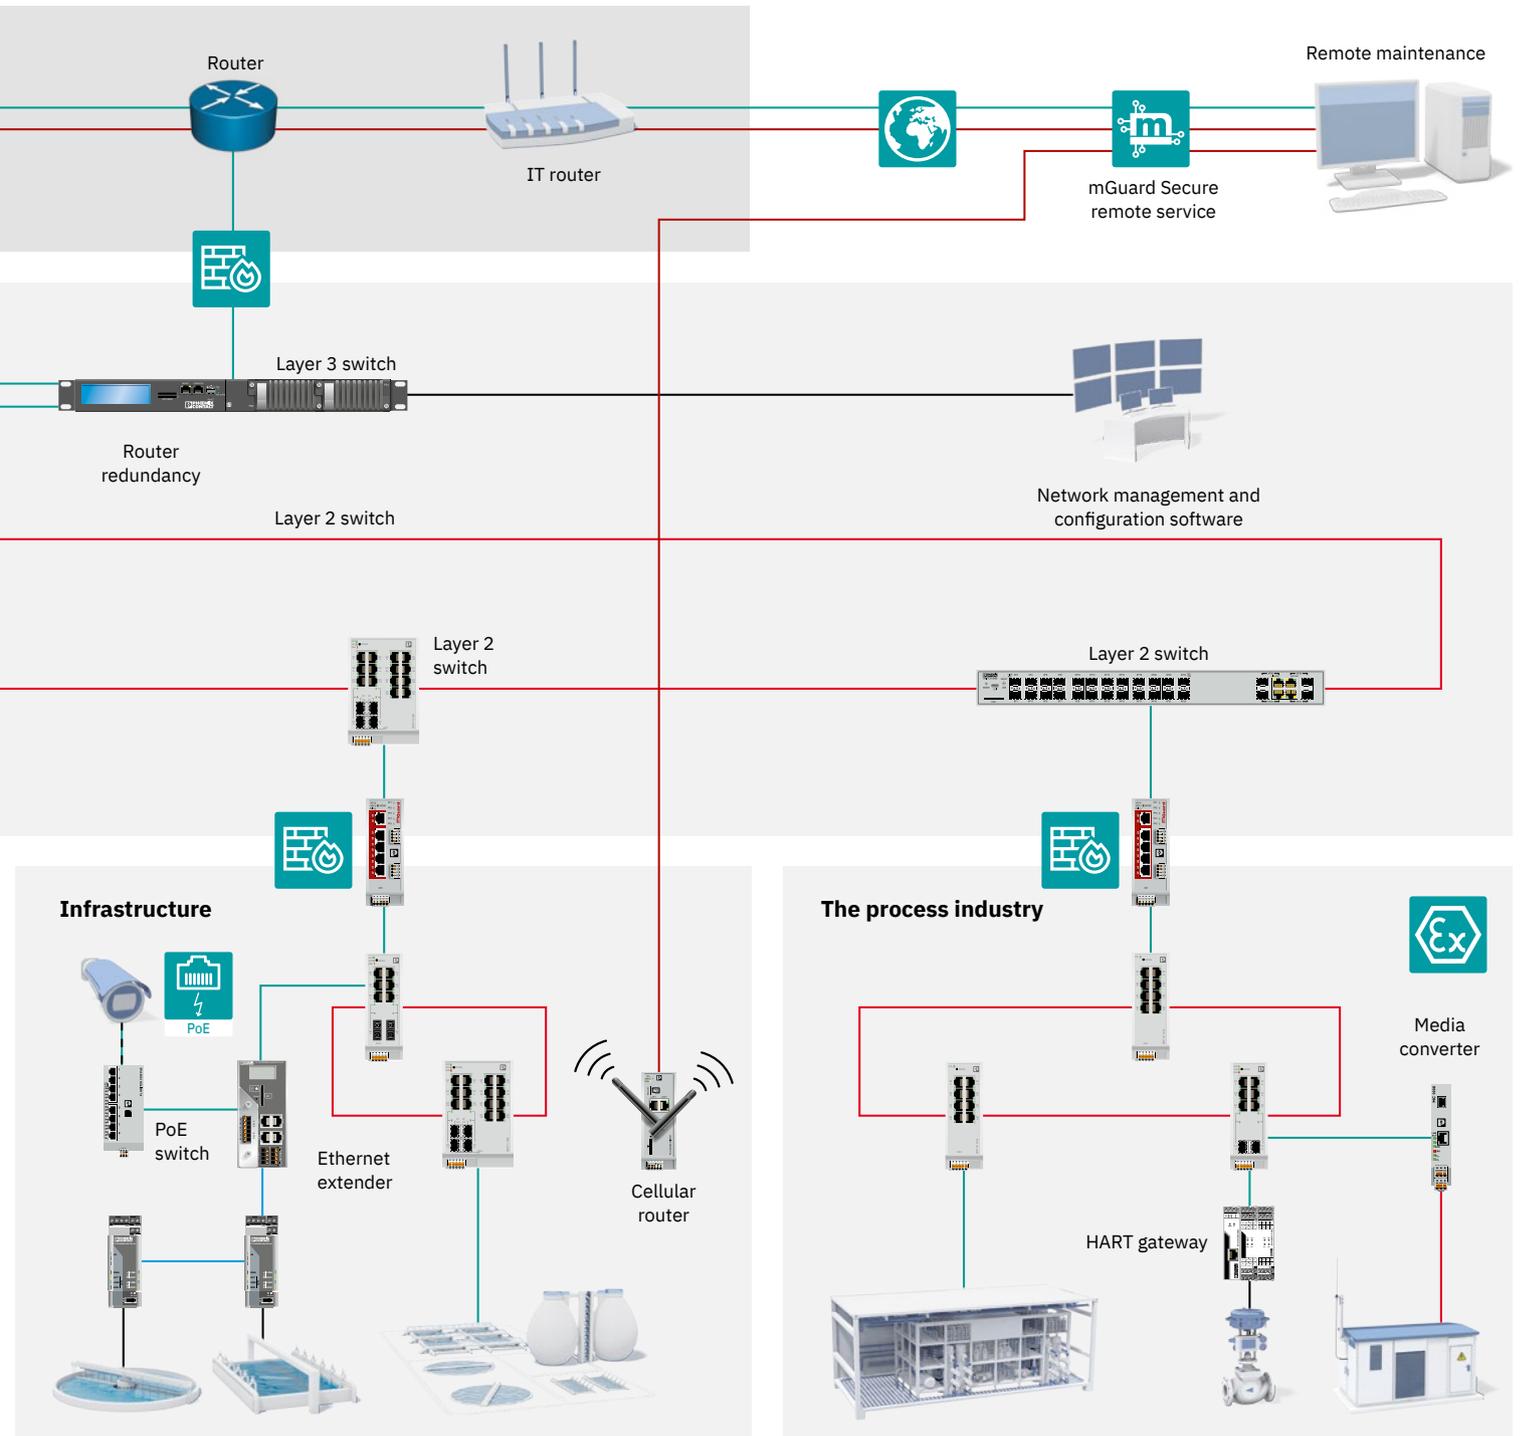

Media converters for Ethernet networks

For high-level immunity to interference and long transmission ranges in industrial applications, media converters transparently convert Ethernet data to fiber optics. Depending on the device and cable, they bridge distances of up to 80 km at data rates of up to 1 Gbps.

Choose among the range of functions suitable for your application and various fiberglass interfaces. The unique mounting accessories also offer particularly flexible installation options.

Web code: #3391

Your advantages

- ✓ Broad portfolio for every application
- ✓ Gigabit communication – ideal for high data throughput applications
- ✓ Compact design and flexible installation
- ✓ Low latency for applications with real-time protocols
- ✓ Redundant power supply

For basic requirements

The series MC 1000 Ethernet media converters are designed for applications with basic requirements. They offer you simple and cost-effective integration of fiber optic technology into your industrial Ethernet networks.

For demanding industrial environments

The MC 1000T media converters meet advanced requirements from applications in demanding industrial environments. The devices are equipped with a metal housing and feature, among other things, an extended temperature range and a redundant power supply. Additional DNV approval enables use in shipbuilding.

With special approvals

The MC 1000E series media converters in this category are suitable for applications with requirements for special approvals. These include potentially explosive areas and power supply and distribution applications. The approval package with IECEx, ATEX, UL HazLoc, as well as IEC 61850 and IEEE 1613 makes the devices ready for worldwide use.

	SM SC	Up to 20 km			MC 1100E-SM20 SC	1331377

For time-critical applications

The MC 1000, MC 1000T, and MC 1000E series devices switch automatically between standard store-and-forward mode with auto negotiation and cut-through operating mode. This enables particularly low latencies to be achieved, ideal for applications with time-critical Ethernet protocols such as PROFINET IRT, Powerlink, EtherCAT, and Sercos lll.

One fiber, numerous possibilities

Media converters with a WDM interface enable a full duplex FO connection with just one FO fiber. This makes the devices ideal for rotating applications. With the WDM media converters, it is possible to connect optical slip rings using a single fiber. They are several times more cost-effective than slip rings with multiple fibers.

Flexible installation

Special mounting accessories enable the devices to be mounted flat on the DIN rail to save space. This means that the devices can also be used in small and flat control cabinets. The outlet directions of the connections can be selected as required. Status LEDs on the front and side show connection statuses at a glance.

Unmanaged switches

Unmanaged switches from Phoenix Contact stand out thanks to their standard functions, variable number of ports, and various designs. With a high level of immunity and a wide temperature range, they are entirely suitable for continuous operation in industrial applications. Select the right switch for your application.

Web code:
#1550
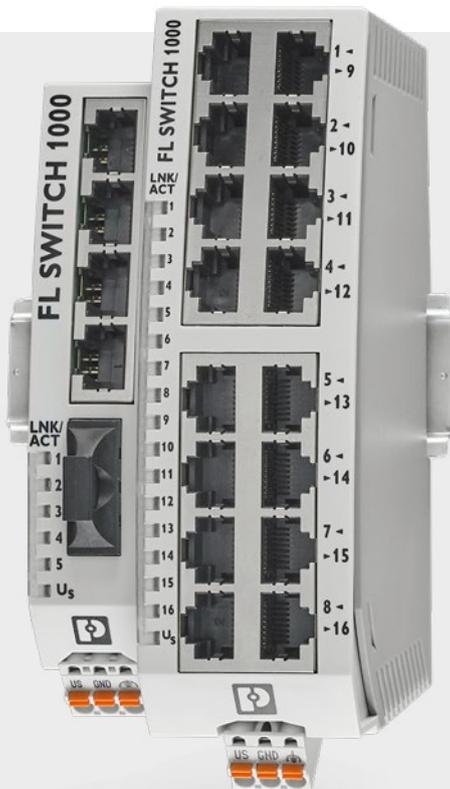

For standard applications

The 1000N series unmanaged switches feature compact designs and flexible installation options. The 1100N switch versions also feature transmission speeds in the Gigabit range. The prioritization of data traffic ensures a more stable network and increases system availability.

For building automation

The 1100 series also includes versions with a suitable design for building automation. Their DIN rail-mount format in accordance with DIN 43880, means that they are specifically designed for use in building distribution boards.

Your advantages

- ✓ Auto negotiation and autocrossing ensure easy network creation and expansion

- ✓ Gigabit versions for high data throughput

- ✓ Electrical isolation and fiber optic versions for failure-free operation in industrial environments

- ✓ Quality of Service for the prioritization of automation protocols
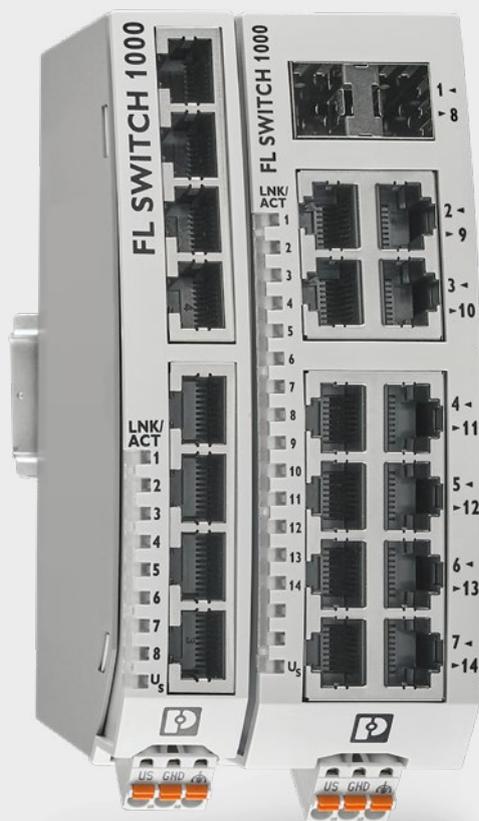

For harsh ambient conditions

Thanks to the extended temperature range, the 1000NT series is designed for use in very demanding applications for the oil and gas industry, shipbuilding, and other outdoor applications. Fiberglass versions also enable long transmission distances.

For field installation

With IP65/IP66/IP67 degrees of protection and M12 connection technology, the 1600 and 1700 series devices are particularly resistant to environmental influences and mechanical strain. The use of filtering and prioritization mechanisms ensures consistent behavior in the network. The use of filtering and prioritization mechanisms ensures consistent behavior in the network.

Managed automation switches

Communication in automation networks differs from communication in company networks in several key aspects. The switches must be tailored to the specific requirements of industrial environments.

Phoenix Contact provides universal 2000 series managed switches tailored to your system with an optimum performance spectrum for standard and PROFINET applications – you can select the appropriate design, approvals, and connections for your needs.

Web code: #1555
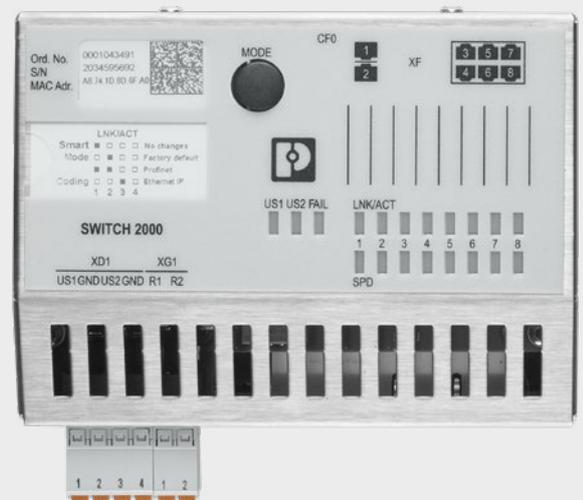

For standard applications

The 2000 series Managed Switches offer clear configuration and diagnostics options as well as automatic error detection and troubleshooting. In addition to the extended scope of functions, the 2200 and 2300 versions enable communication via fiberglass as well as approvals for the process industry and maritime sector. The NAT versions combine switching and routing in just one device.

For flat control cabinets

With their low depth and downward port outlet direction, the FL SWITCH 2400 and 2500 versions are particularly suitable for use in flat control cabinets. The devices with eight or 16 ports can also be used in extreme ambient conditions due to their robust metal housing.

Your advantages

✓ Easy integration into existing networks and flexible redundancy for all topologies thanks to the RSTP standard

✓ High availability with fast redundancy switch-over by means of Fast Ring Detection and MRP

✓ Diagnostics and analysis options thanks to integrated software functions

✓ Certified in accordance with IEC 62443-4-1 and IEC 62443-4-2
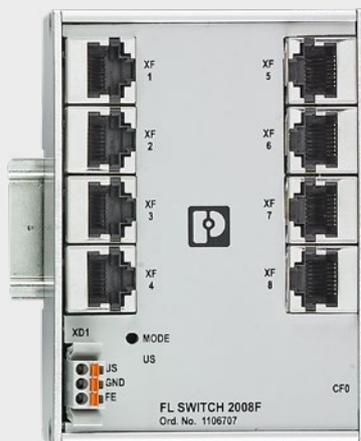

For flat control cabinets

The FL SWITCH 2008F provides the proven functions of the FL SWITCH 2000 family in tight spaces. Featuring an extremely flat design, the eight-port device with forward port outlet direction can be used in very flat control cabinets.

For field applications

The FL SWITCH 2600 and 2700 versions are available for applications directly in the field. The robust housings enable mounting on a profile or on the wall and support classic M12 and M12 push-pull connections which makes them extremely flexible in application. Moreover, a redundant power input/output also enables scalable networks.

Managed switches for the latest communication technologies

New technologies such as TSN, SPE, and Ethernet-APL are required to control large volumes of data and operate real-time-critical applications in a convergent network right down to the field level. Discover our portfolio of state-of-the-art switches for the direct integration of sensors and actuators into the Ethernet network with SPE/APL and the realization of real-time capable Ethernet networks with TSN.

ℹ **Web code:** #1555
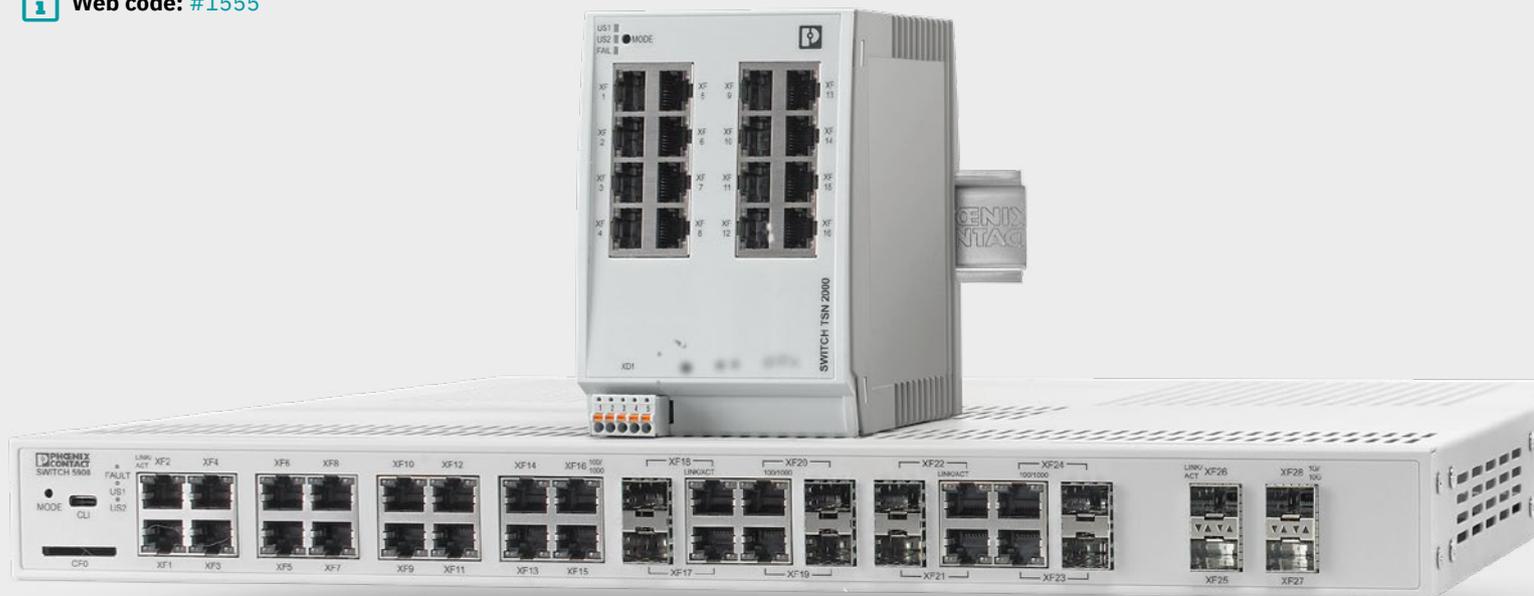

For Time-Sensitive Networking

With innovative TSN mechanisms, the FL SWITCH TSN 2300 increases the performance, robustness and availability of Ethernet networks. They support all relevant functions for use in PROFINET TSN and CC-Link IE TSN applications – such as precise time synchronization, frame preemption, and scheduled traffic/time-aware shaping.

Your advantages

- ✓ SPE and Ethernet-APL enable end-to-end Ethernet communication right down to the sensor level

- ✓ TSN enables real-time and deterministic data transmission for complex automation networks

- ✓ The managed switches have the proven FL SWITCH-2300 features

- ✓ Setup of a future-proof network infrastructure

For Single Pair Ethernet

Single Pair Ethernet (SPE) enables consistent IP-based communication down to the field level. Transmission of Ethernet data and the power supply via a single pair of wires. The SWITCH 2303-8SP1 devices support the 10BASE-T1L standard and enable long distances of up to 1,000 m.

For Ethernet-APL

The APL switch connects sensors and field devices that communicate via two-wire Ethernet (10BASE-T1L, Ethernet-APL) to the system's Ethernet network in the Ex zones. This network can be used for process control and/or monitoring and diagnostics.

Products

Managed switches for power plants

The Raptor portfolio features particularly high performance and availability for demanding applications in areas such as power supplies and critical infrastructure. The EP series modular managed switches have been specially designed for robust networks and ensure efficient data communication and maximum operational safety.

ℹ️ **Web code:** #3584
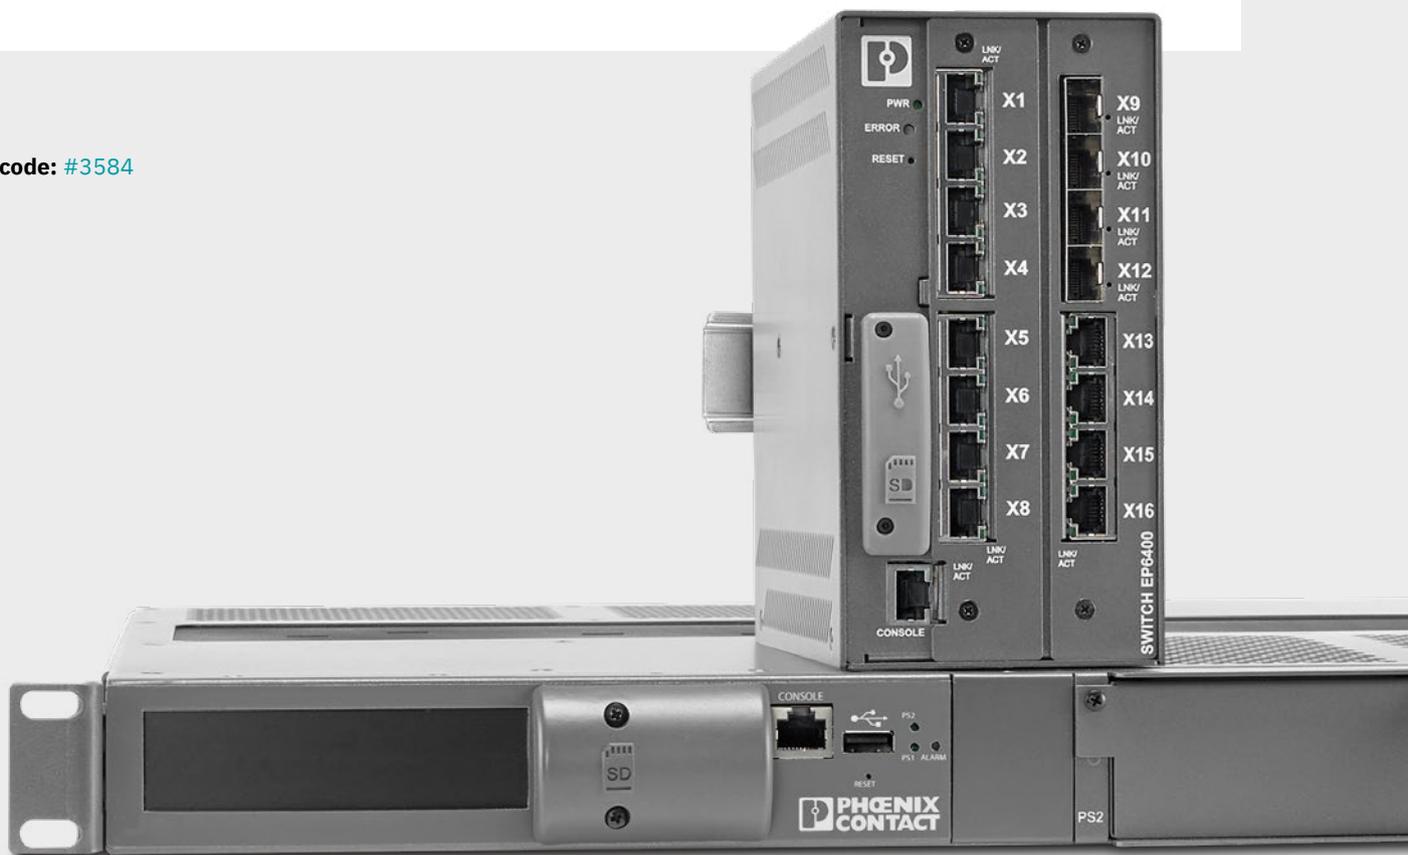

For demanding applications

The EP series managed switches are ideal for demanding applications in the energy sector. They ensure reliable operation even under extreme ambient conditions. The portfolio meets the strict requirements of IEC 61850-3 and IEEE 1613 and feature comprehensive safety functions. With their modular design, the switches can be adapted flexibly to different requirements.

Your advantages

- ✓ Reliable operation under extreme conditions with IEC 61850 and IEE 1613 certification

- ✓ Support of partner applications for network management, specific fields of application, and security

- ✓ Flexible 19" rack or DIN rail mounting

- ✓ High connection density and diverse selection of communication modules

	Flat DIN rail mounting	22.5 mm	FL DIN-RAIL ADAPTER 22.5	1085485
		40 mm	FL DIN-RAIL ADAPTER 40	1085484

Characteristics	Copper ports	FO ports	Port speed	Quality of Service	Special features	Item no.
Unmanaged switches with DIN rail-mount format						
Supply voltage: 9 V DC … 32 V DC, 12 V AC … 30 V AC, temperature range: 5°C … 50°C						
	8 x RJ45	–	10/100/1000 Mbps	●	DIN rail-mount design in accordance with DIN 43880	1473643
	4 x RJ45 4 x PoE	–	10/100/1000 Mbps	●		1473642
Unmanaged switches for rack mounting: FL SWITCH 1800 and 1900						
Supply voltage: 120/220 V AC, temperature range: 0°C … +60°C						
	24 x RJ45	–	10/100 Mbps	●	19" mounting	2891041
		–	10/100/1000 Mbps	●		2891057

* DC supply only

Product overview for unmanaged switches

Characteristics	Copper ports	FO ports	Port speed	Quality of Service	Special features	Item No.
Robust unmanaged switches with IP67: FL SWITCH 1600 and 1700						
Supply voltage: 24 V DC, temperature range: -40°C … +70°C						
	5 x M12	–	10/100 Mbps	●	With PTCP filter for PROFINET	2700200
	5 x M12	–w	10/100/1000 Mbps	●	Jumbo frames, extended Quality of Service functionality (such as EtherNet/IP™, BACnet)	1386090
	8 x M12	–	10/100 Mbps	●	M12 push-pull, Quality of Service functionality (PROFINET)	1196227
	8 x M12	–	10/100/1000 Mbps	●	M12 push-pull, extended Quality of Service functionality	1196228

Characteristics	Copper ports	FO ports	Port speed	Quality of Service	Special features	Item No.
Unmanaged Power over Ethernet switches: FL SWITCH 1000 PoE						
Supply voltage: 18 V DC … 57 V DC, extended temperature range: -40°C … +75°C, IEEE 802.3 af/at (PoE+)						
	4 x RJ45 (PoE) 1 x RJ45	–	10/100 Mbps	●	30 W per port, max. 120 W	2891064
	2 x RJ45 (PoE)	2 x SFP		●	52 V DC … 57 V DC, 30 W per port, max. 60 W	1026765
	4 x RJ45 (PoE) 1 x RJ45	–	10/100/1000 Mbps	●	30 W per port, max. 120 W	1026937
	4 x RJ45 (PoE) 1 x RJ45	1 x SFP		●		1026932

Characteristics	Copper ports	FO ports	Port speed	Quality of Service	Special features	Item No.
Supply voltage: 18 V DC … 57 V DC, temperature range: -10°C … +60°C, IEEE 802.3 af/at (PoE+)						
	4 x RJ45 (PoE), 1 x RJ45	–	10/100/1000 Mbps	●	30 W per port, max. 120 W, electrical isolation, IEEE 802.3 af/at (PoE+)	1102077
	8 x RJ45 (PoE)	–		●		1102079
	8 x RJ45 (PoE)	–	10/100 Mbps	●	Max. 120 W, ultra-narrow housing	1343031
Supply voltage: 20 V DC … 57 V DC, extended temperature range: -40°C … 70°C, IEEE 802.3 af/at (PoE+)						
	8 x RJ45 (PoE+)	2 x SFP	10/100/1000 Mbps	●	–	1467018
Supply voltage: 46 V DC … 57 V DC, temperature range: -10°C … +60°C, IEEE 802.3 af/at/bt (PoE++)						
	8 x RJ45 (PoE++)	–	10/100 Mbps	●	90 W per port, max. 240 W	1342622
		–	10/100/1000 Mbps	●		1343034
	5 x RJ45 (PoE++)	2 x SFP	10/100/1000 Mbps	●		1342621
Supply voltage: 18.7 V DC … 30.5 V DC, extended temperature range: -40°C … +50°C, IEEE 802.3 af/at (PoE+)						
	8 x M12 (PoE+)	-	10/100/1000 Mbps	●	Jumbo frames up to 9600 bytes	1119230

	–	–	–	–	Power supply unit for redundant power supply	5900-P5	1525946

Easy configuration

The managed Switches enable configuration via web browser, SD card, SNMP, CLI, or controller.

Common protocols supported

Phoenix Contact managed switches support functions for use in PROFINET and EtherNet/IP™ applications.

Flexible transmission distance

Thanks to SFP ports and compatible SFP modules, you can adapt the switches to your application and bridge even large distances.

Product overview for managed switches

Characteristics	Copper ports	FO ports	Combo ports	Port speed	Special features	Designation FL SWITCH...	Item no.
Layer 2 switches for power plants: FL SWITCH EP 4200 and 5200

* Optionally available with 24 SFP ports

Power over Ethernet (PoE)

Power over Ethernet devices suitable for industrial use enable the combined transmission of power and data via an Ethernet connection (LAN). You can therefore integrate end devices, such as WLAN access points, IP phones, and IP cameras into your network quickly and cost-effectively.

ℹ **Web code:** #1557

Injectors

The compact stand-alone solution is available in different performance classes up to 60 W. In addition to the RJ45 jack, the PoE injectors feature alternative connection technologies for the field cabling as well as integrated surge protection.

Unmanaged switches

The extended temperature range of the unmanaged PoE switches enables reliable operation in harsh environments. Furthermore, the switches have full gigabit ports and jumbo frames that were developed specifically for the high data requirements of surveillance cameras.

Smart Ethernet Box

The Smart Ethernet Box is an outdoor
PoE switch with integrated power supply,
surge protection, splice tray for fiber
optics, and a DIN rail for additional
accessories. Featuring up to four Gigabit
Power over Ethernet ports and two
uplink ports, it is the ideal all-in-one
device for a large number of applications,
such as video surveillance, LED lighting,
WLAN access point, and other network
applications.

Managed switches

The managed PoE switches offer a high degree
of flexibility with multiple port constellations and
high power budgets of 60 W per port for the use
of PoE-operated high-power devices. PoE-specific
managed features make it possible to control,
plan, and monitor devices from a remote location.

Splitter

The PD 1001 PoE splitter splits data and power
locally and therefore enables even non-PoE-
capable devices to be installed in remote stations
in an easy and inexpensive way.

Products

Industrial Wireless

Industrial wireless systems enable flexible automation. With wireless LAN or Bluetooth, you can avoid cable runs and integrate mobile devices into the network. The wireless Ethernet systems from Phoenix Contact ensure reliable communication under harsh conditions and are optimized for fast PROFINET and EtherNet/IP™ transmission. We also support you in designing your custom wireless network.

[i] **Web code:** #0958

Contactless power and data transmission

With NearFi couplers, power (24 V, 2 A) and real-time Ethernet data (100 Mbps, full duplex) can be transmitted across an air gap of a few centimeters.

Industrial Bluetooth

The EPA modules combine a reliable wireless module with an integrated antenna in a robust IP65 housing. This allows you to establish functionally safe communication via PROFIsafe or SafetyBridge Technology.

Your advantages

- ✓ Seamless and inexpensive integration into existing networks with flexible installation and configuration concepts

- ✓ Particularly high levels of reliability and availability with optimum properties for industrial applications

- ✓ Versatile use with Ethernet as the common communication standard – even for safety applications

Industrial WLAN

The high-performance WLAN modules with the latest WLAN standard 802.11ax (Wi-Fi 6/6E) offer maximum reliability, improved real-time capability, and support large networks with many participants. Wi-Fi 6E also opens up the 6 GHz band with numerous new, previously unused transmission channels.

Industrial security

Protect your systems against unauthorized access by people or malware with the mGuard security product family from Phoenix Contact. Use industrial router/firewall solutions and industrial-grade virus protection to protect your automation network.

The VPN-compatible devices also enable sensitive data to be transmitted in encrypted form, providing secure remote maintenance of machines over public networks.

Your advantages

- Certified in accordance with IEC 62443-4-1 und IEC 62443-4-2

- Can be retrofitted easily, thanks to stealth mode

- Central management software for global management of several thousand field devices

Protection of machines and production cells

Use mGuard devices to protect your machines and production cells against unauthorized access – regardless of whether access is from the local network or via the Internet. A wide range of security functions as well as central management software help to easily increase the security level of your production facilities.

Product overview for industrial security

Characteristics	Port configuration	Port speed	VPN	Special features	Designation FL MGUARD...	Item no.
Secure integration of machines in production networks: mGuard 2000						
Routing, NAT, firewall, VPN remote access and mGuard Secure Cloud connection, IEC 62443-4-2 certified						
	2 x RJ45	10/100/1000 Mbps	Up to 2 VPN tunnels	–	FL MGUARD 2102	1357828
	5 x RJ45			Integrated 4-port unmanaged switch	FL MGUARD 2105	1357850
Secure integration and segmentation of OT networks: FL mGuard 4000						
+ PI/Port group, conditional firewall, user firewall, domain name firewall, IEC 62443-4-2 certified, DNV certified						
	2 x RJ45	10/100/1000 Mbps	Up to 250 VPN tunnels		FL MGUARD 4302	1357840
	5 x RJ45			Integrated 3-port managed switch, DMZ port	FL MGUARD 4305	1357875
	2x RJ45			ATEX and IECex certified	FL MGUARD 4302 KX	1696708
	5 x RJ45				FL MGUARD 4305 KX	1696779
High-performance security plug-in card for IPCs: mGuard PCI/PCIE 4000						
+ PI/Port group, conditional firewall, user firewall, domain name firewall, IEC 62443-4-2 certified, DNV certified						
	2 x RJ45	10/100/1000 Mbps	Up to 10 parallel tunnels (up to 250 as an option)		4102 PCI	1441187
					4102 PCIE	1357842
Central device and patch management: mGuard Device Manager (MDM)						
	The mGuard Device Manager provides support for the configuration, rollout, and management of all mGuard devices. Create and manage all security-related mGuard settings centrally and then transfer them to the desired devices.			English	DM UNLIMITED	2981974

Certified security for your network

Phoenix Contact provides a broad portfolio of IEC 62443 certified products. These certifications confirm compliance with international security standards and reduce the risk of cyberattacks on industrial networks.

Planning reliability for the future

In addition to the product certifications, our development process has also been tested by TÜV Rheinland in accordance with IEC 62443-4-1. Secure by Design is incorporated into all new products. In addition, our certified Product Security Incident Response Team (PSIRT) ensures a rapid response to security incidents.

Our certifications facilitate integration into new and existing security concepts and give you the assurance that you will also be able to meet future requirements. All certifications are part of Phoenix Contact's holistic 360° security concept, which ensures the security of products and systems throughout their entire life cycle.

> For more information on our 360° security concept, visit phoenixcontact.com/cybersecurity
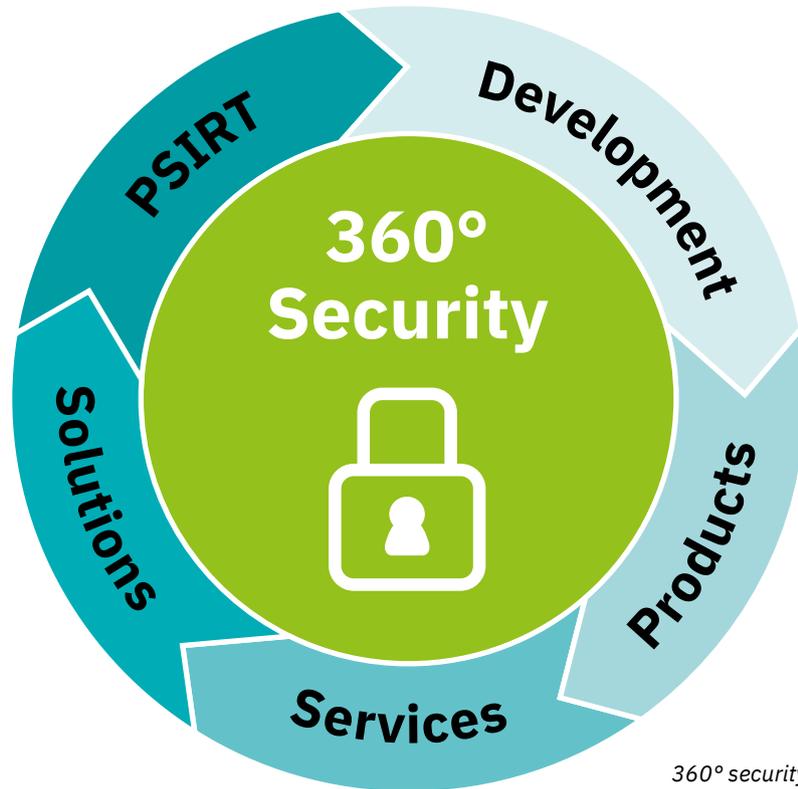

360° security: All-round protection for your systems

Remote communication

Machines and systems are often distributed over wide areas. Securely connecting distributed stations to the control room is made possible with the versatile possibilities of remote communication. Remote communication enables access as well as continuous process data monitoring from the central station.

Phoenix Contact provides a broad portfolio of products for wireless and wired remote access for this purpose.

ℹ️ **Web code:** #0499

Remote maintenance via the Internet

The Cloud Clients and mGuards enable secure connection to the mGuard Secure Cloud. Communication takes place via the operator network (Ethernet/WLAN) or cellular communication. While the cloud client can only connect to the mGuard Secure Cloud, the mGuard devices also offer peer-independent VPN tunnels, NAT, and more powerful firewalls.

Remote maintenance via the cellular network

The TC ROUTER cellular routers enable robust data connections over public and private 4G/5G networks. This allows you to establish a mobile broadband connection for highly flexible site networking even in harsh and demanding environments where a wired Internet connection is not available.

mGuard Secure Cloud

The mGuard Secure Cloud is a turnkey solution for remote maintenance. You can connect quickly and securely to machines, industrial PCs, and controllers via a simple web interface. Service employees can access the devices worldwide via VPN and carry out maintenance without being on site – this saves time, costs and increases efficiency.

Global cellular connection

The Cellulink outdoor cellular routers connect your system flexibly and securely to the cellular network. The robust housing with integrated antennas and PoE saves time and money. With IEC 62443-4-2 certification, Cellulink guarantees secure data transmission.

Remote control via in-house cabling

With the Gigabit Ethernet extender system, you can easily connect large IP networks over distances of up to 20 km using existing two-wire cables. The combination of unmanaged and managed extenders enables particularly cost-effective networking and central diagnostics of all devices and paths via IP.

Products

Time servers

The FL TIMESERVER makes time and location information available in the Ethernet network via NTP protocol. The time is received via GPS, Galileo, or GLONASS even without an Internet connection. The IP68 housing with integrated antenna is suitable for outdoor installation.

ℹ Web code: #2459

Your advantages

- ✓ NTP time server for Ethernet networks
- ✓ GNSS (Global Navigation Satellite System) receiver for GPS, Galileo, and GLONASS
- ✓ Location information can be obtained via NMEA, SNMP, or web-based management
- ✓ Diagnostic LEDs for power supply and satellite reception

Product overview – Time servers

NTP time server with GNSS receiver

	Main features	Designation	Item no.
	• Power over Ethernet supply via the network cable • Alternative 10 V DC ... 30 V DC supply • IP68 housing • Integrated antenna • Temperature range: -40°C ... +70°C • Outdoor installation including panel feed-through (40 mm diameter)	FL TIMESERVER NTP	1107132

Geolocation

The FL TIMESERVER NTP provides accurate geolocation information (GPS coordinates). This information can be used for determining the exact location, such as of containers, vehicles, and buildings. Precise position determination via web-based management, SNMP, NMEA, or JSON streaming.
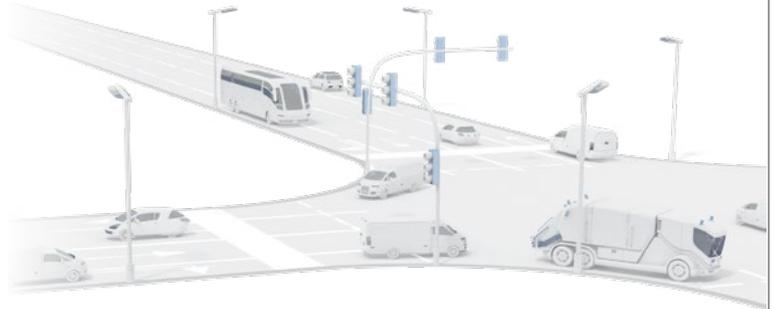

Time synchronization

In Ethernet networks, it is very important that all devices have an accurate, synchronized system time. This enables the times of all decentralized activities within the network to be documented with a high degree of accuracy. A sequence of events can only be displayed if all of the devices display exactly the same time.

The FL TIMESERVER NTP provides precise time synchronization for Ethernet devices in a network via the NTP protocol. This function does not require Internet access, which guarantees even greater security in the network.

Switch
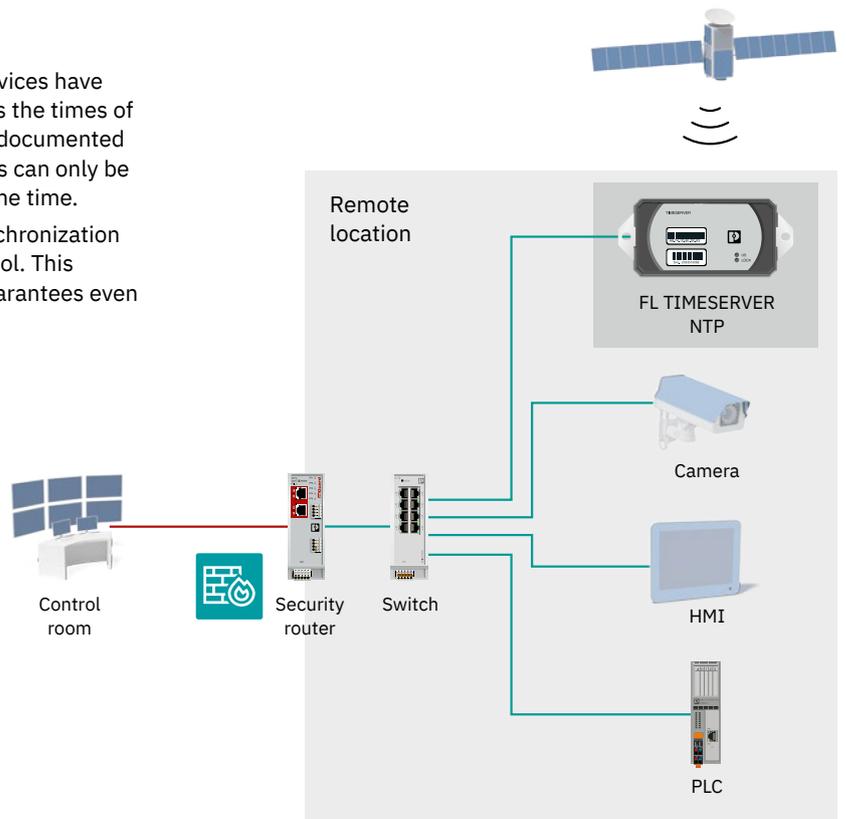

Protocol and interface converters

Device servers and gateways enable easy integration of legacy serial devices and buses into modern Ethernet networks. The most common industrial data transmission protocols are supported, with various combinations of serial transmission.

Depending on the application, choose between simple device servers for interface conversion or gateways and proxies with integrated protocol conversion.

Web code: #2717

Converting serial interfaces

You can integrate any serial protocols into your Ethernet network using the serial device servers and gateways. Serial data can either be transmitted transparently over Ethernet or converted to Modbus/TCP, PROFINET, or EtherNet/IP™ using the gateways.

Your advantages

- ✅ Universal use in various applications
- ✅ Network integration of serial devices via virtual COM ports
- ✅ Cable replacement in serial point-to-point connections
- ✅ Integration of serial devices into modern Ethernet protocols
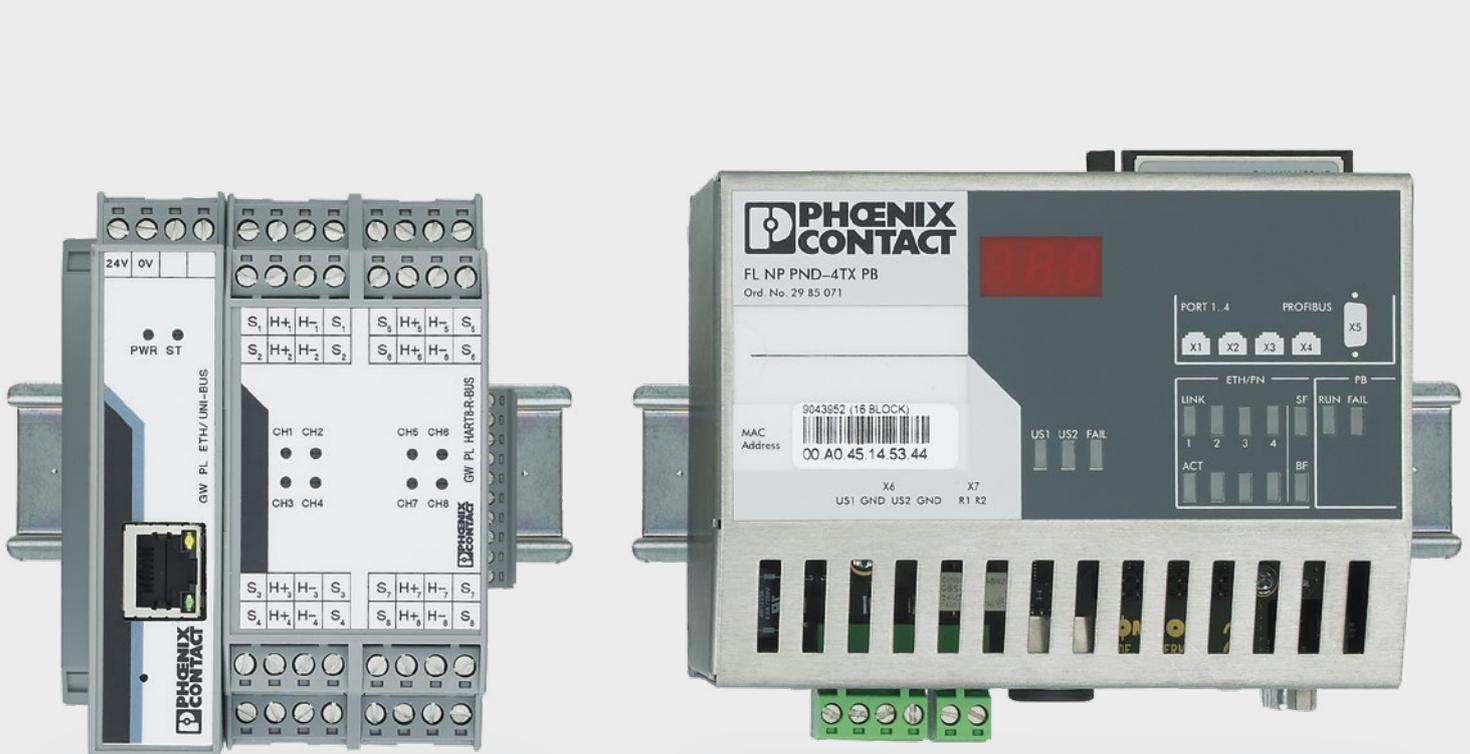

Converting the HART protocol

The HART gateways convert the digital HART protocol into Ethernet protocols, HART-IP, Modbus/TCP, or PROFINET. This means you can easily parameterize and monitor HART field devices via Ethernet networks. Thanks to the modular HART to Ethernet gateway, you can connect up to 40 HART devices.

Converting the PROFIBUS and INTERBUS protocols

Use the gateways and proxies to smoothly integrate PROFIBUS and INTERBUS applications into a PROFINET network. Our gateways for PROFIsafe also enable controller-independent and comprehensive integration of functional safety.

Product overview for protocol and interface converters

	Protocol	Ethernet interface	Serial interface (RS-232/RS-422/RS-485)	Special features	Designation	Item no.

Products

Network management software

Configure and monitor your system intuitively using software tools from Phoenix Contact. Our solutions enable you to use Ethernet networks efficiently in automation systems.
The FL Network Manager and the mGuard Device Manager help you to easily configure and commission your network components.
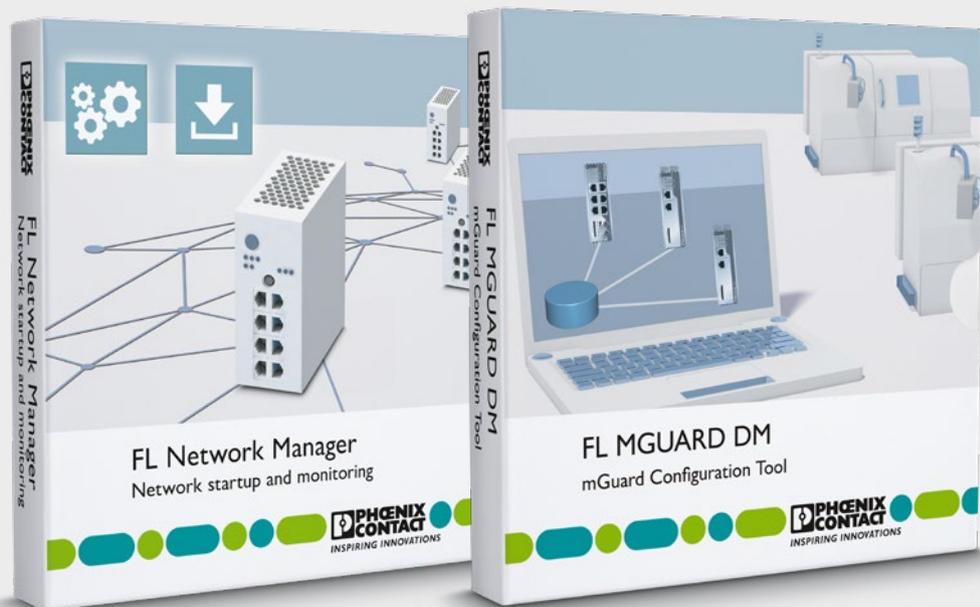

Your advantages

- ✓ Fast diagnostics with continuous querying of the network devices
- ✓ Reduced downtimes and outages, thanks to the short response time in the network
- ✓ Direct access to the individual web interfaces of the devices
- ✓ Error detection even for temporary errors in the network

Product overview for software

	Description	Language	Basic	Item no.
Network configuration and startup: FL Network Manager				
	Start up your network quickly and easily with the FL Network Manager software. The software provides support for the scanning and display of existing networks, the IP assignment and configuration of multiple devices, handling configuration files, and firmware updates.	English	SNMP	2702889
mGuard configuration and startup: mGuard Device Manager				
	The mGuard Device Manager provides support for the configuration, rollout, and management of all mGuard devices. Create and manage all security-related mGuard settings centrally and then transfer them to the desired devices.	English	–	2981974

Network Manager

The use of managed switches or WLAN components always involves configuration effort. The Network Manager makes it easier to deal with the growing number of managed devices in a network, as network components can be monitored, configured, and kept up to date using one tool. To also satisfy industrial Ethernet protocols EtherNet/IP™ and PROFINET, IP assignment is integrated via DHCP and DCP. To check the configuration, a topology with redundancy diagnostics can be displayed. The new VLAN wizard makes configuring virtual networks quicker and easier than ever before – even for less experienced users.
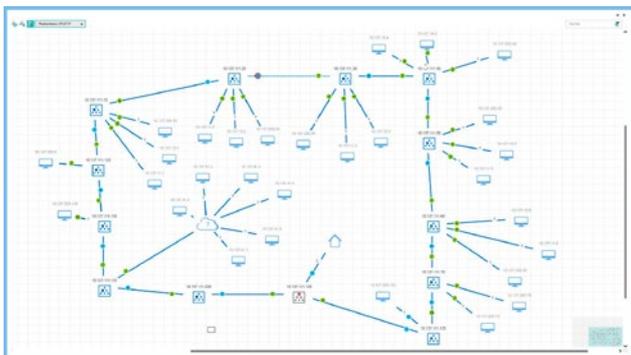

Startup support for the mGuard Device Manager

The mGuard Device Manager is ideal for rolling out and managing large groups of mGuard devices that are configured identically. Widely distributed installations with thousands of systems can be implemented quickly and efficiently.

For easy initial startup of the software, support from a member of the Phoenix Contact team by means of remote access is included.

Surge protection

To ensure uninterrupted production, all the relevant data and signals must be transmitted reliably. In addition to unauthorized access and malware, overvoltages caused by lightning strikes or switching operations also pose a danger to your network. The devices are particularly at risk if the cabling spans several buildings.

Protect your devices with surge protection from Phoenix Contact and avoid expensive repairs, downtimes, and data losses.

Web code: #0145

Your advantages

- Protection in accordance with Class E_A (CAT6$_A$)
- Reliable transmission up to 10 Gbps
- Power over Ethernet (PoE+) "Mode A" and "Mode B"
- RJ45 intermediate plug with separate grounding cable and ground connection snap-on foot for NS 35 DIN rails

Product overview for surge protection

	III/T3	230 V AC	5 kA	Plug, base element	PLT-SEC-T3-230-FM-UT	2907919
		120 V AC			PLT-SEC-T3-120-FM-UT	2907918

Microelectronics are at particular risk

Sensitive electronic components are the most commonly affected by surge voltage damage.
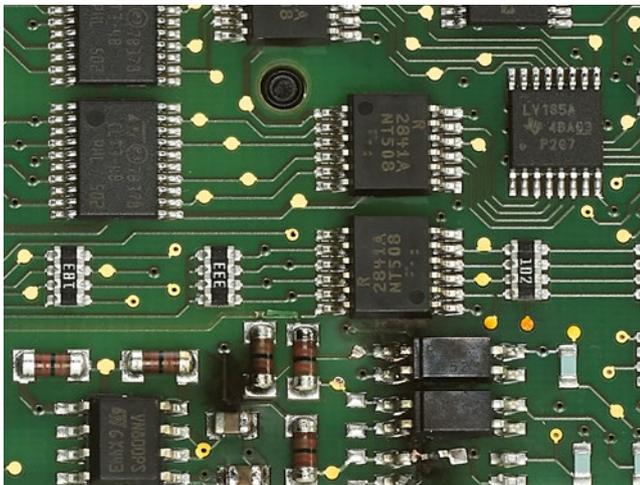

Customized use

The DATATRAB series can be used as an adapter or DIN rail module.

Installation technology

In addition to reliable active components, a high-performance network requires a robust installation. Phoenix Contact installation technology provides you with all the necessary components for implementing industrial networks.

ℹ️ **Web code:** #1561

Injectors

The compact stand-alone solution is available in different performance classes up to 60 W. In addition to the RJ45 jack, the PoE injectors feature alternative connection technologies for the field cabling as well as integrated surge protection.
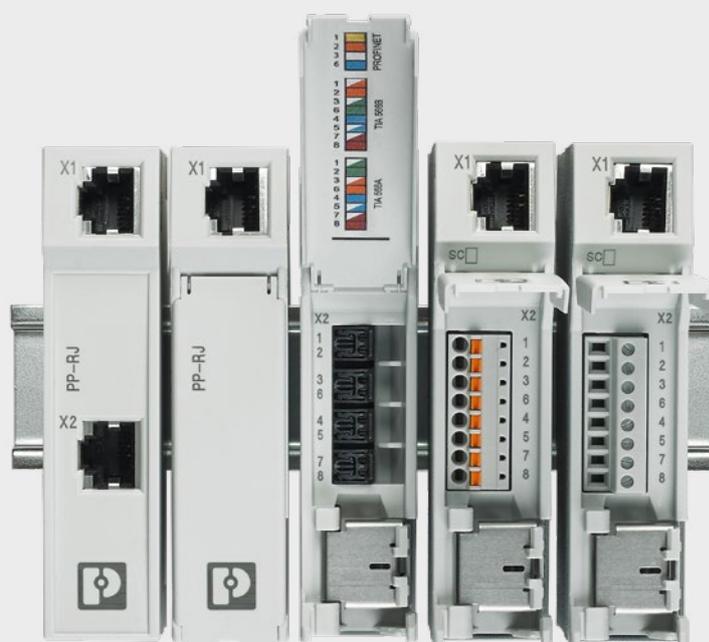

Patch panels

Ethernet patch panels enable quick and easy connection between your field and control cabinet cabling. In the covered wiring space, IDC, Push-in, or screw connection simplifies installation of the field cable. As an option, these interface modules are also available with surge protection and shield current monitoring.

SFP modules

SFP (small form-factor pluggable) modules enable you to flexibly use the SFP ports of your Ethernet switches. Whether you require singlemode or multimode transmission, Fast Ethernet or Gigabit, Phoenix Contact offers the right SFP modules for your application.

Network isolators

The FL ISOLATOR electrically isolates copper-based Ethernet devices with transmission speeds of up to 1 Gbps. The Ethernet isolator is simply installed upstream of the network device that is to be protected. As such, high-voltage ranges in power distributions up to 4 kV can be disconnected securely from the data network and equipotential bonding currents prevented.

				10/100 Mbps	–	100-RJ/RJ	2313931
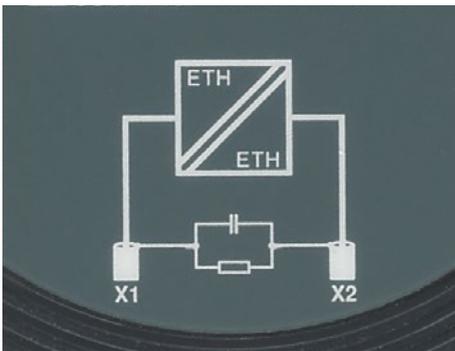

Protect network devices

With the high-quality isolation for up to 4 kV, you can protect your Ethernet devices and interfaces and increase immunity.

Flexible mounting

Available either as a DIN rail module with RJ45 connection or for panel mounting with an M12 connection.

Approved for railway applications

With vibration-resistant M12 connection technology, railway requirements are satisfied in accordance with EN 50155 and EN 50121.

Copper-based data cabling for networks and fieldbuses

Complex automation processes call for high volumes of data at ever-increasing transmission speeds. Benefit now from powerful connectors and cables for assembly on-site. Whether future-proof high-speed cabling up to 10 Gbps or innovative hybrid cabling – we have the perfect solution for your automation network.

Web code: #0297
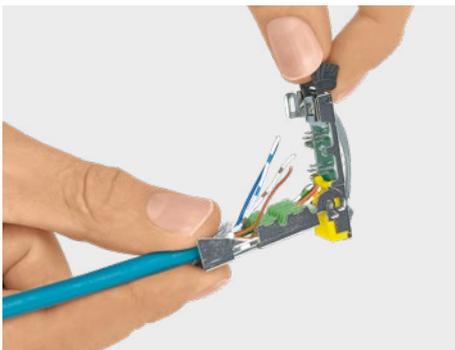

Fast assembly

Fast assembly without special tools with IDC and pierce fast connection.

Wide range of connectors

From SPE and RJ45 through USB, HDMI, coaxial, and D-SUB to M12.

Flexible device connection

Flexible device connection with versatile housing feed-throughs for devices and control cabinets.

Your advantages

- ✓ Up to 10 Gbps
- ✓ From IP20 to IP69K with 360° shielding concept
- ✓ Four- and eight-position versions
- ✓ IDC, Push-in, or pierce connection
- ✓ Innovative hybrid cabling
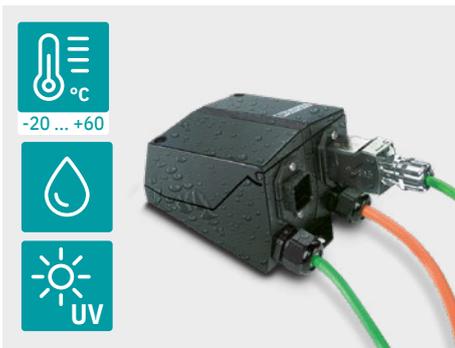

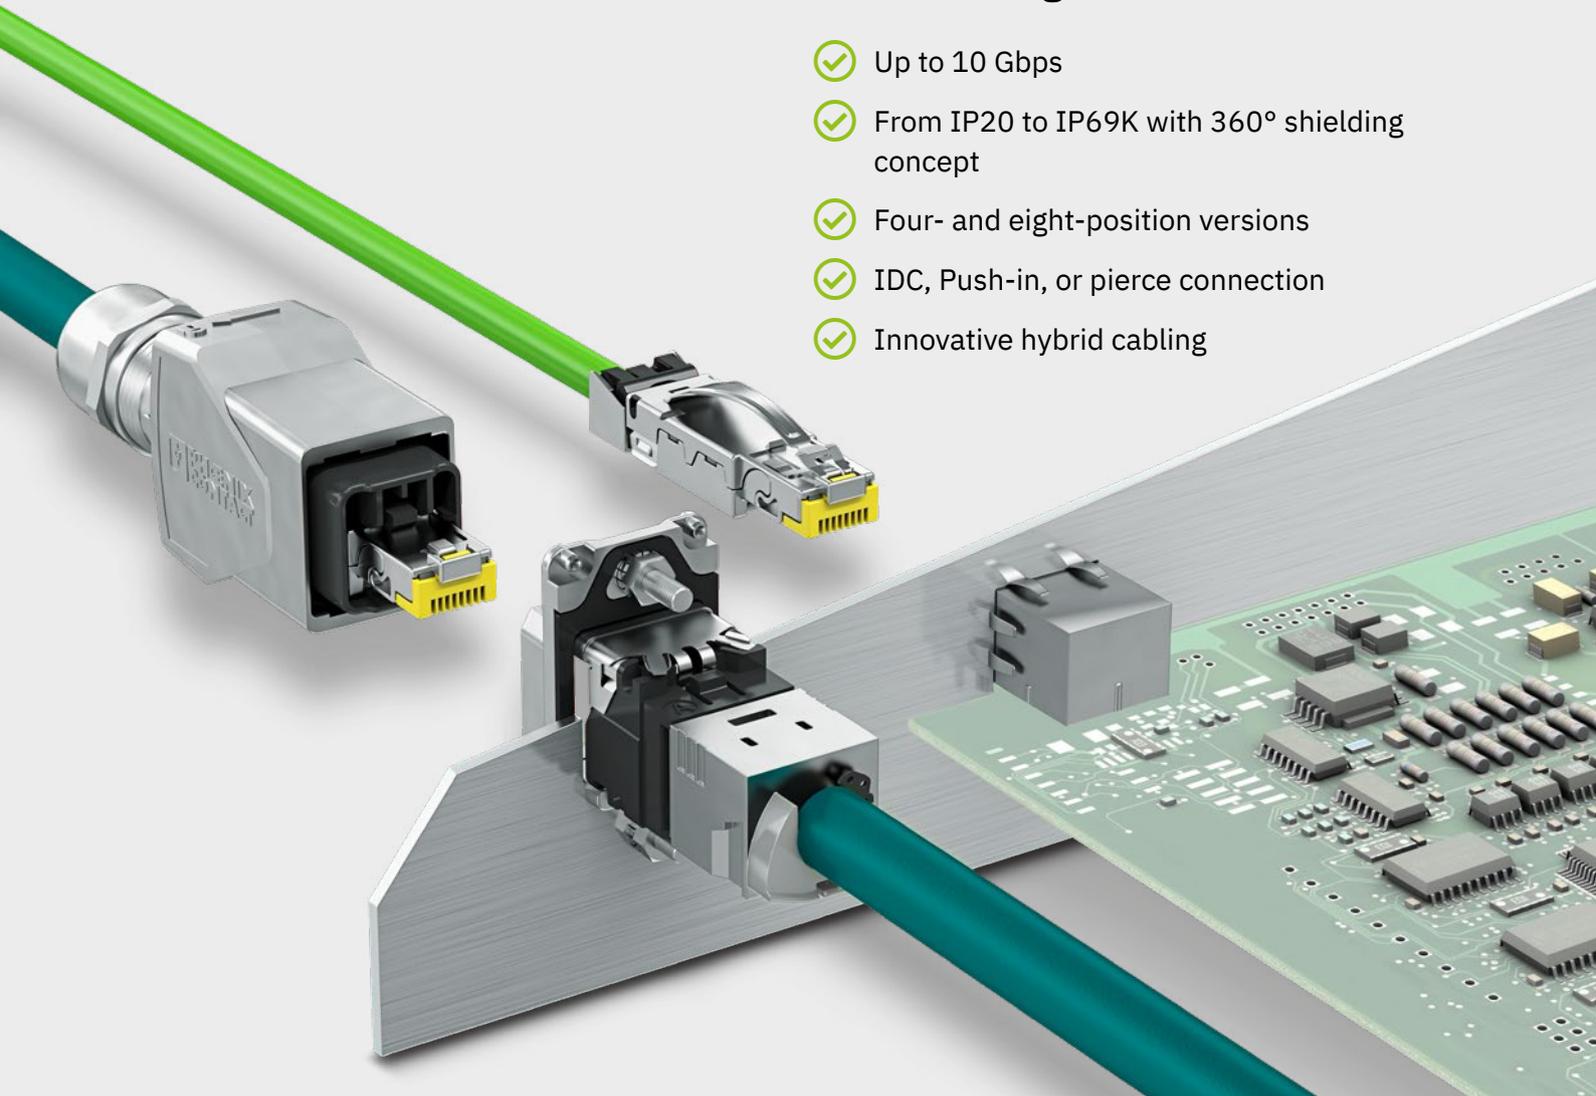

Reliable protection

Reliable protection against extreme temperatures, liquids, vibrations, and UV light.

Fast data transmission

Fast data transmission with data rates up to 10 Gbps and components that meet the CAT6$_A$ standard.
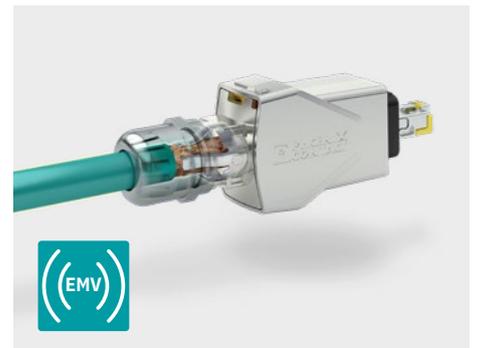

Special shielding concepts

Special shielding concepts with 360° EMC shielding guarantee a high level of resistance to EMI and ESD.

RJ45, connectors and sockets, IP20

PROFINET cable, type 93B

The type 93B PROFINET cable is designed for flexible installation and is oil-resistant to a degree. It is UV-resistant for 1,200 seconds in accordance with UL 1581, which makes it suitable for outdoor use. Its transmission properties meet CAT5.

- Outer sheath material: PVC
- Minimum bending radius: 7 x D
- Tested at: -20°C ... +25°C

RJ45, patch cables for Ethernet, up to 1 Gbps

Assembled cables for Ethernet networks

	Cable structure	Conductor structure/ Signal line	Description	By the meter	100 m ring
93E					
	2 x 2 x 28 AWG	7 x 0.25 m	Ethernet cable for flexible installation. The cable is halogen-free, oil-resistant, and its transmission properties meet CAT5e.	1416415	1416305
94A					
	4 x 2 x 24 AWG	Single-strand, Twisted pair	Ethernet cable for fixed installation. The cable's transmission properties meet CAT5e.	1416415	1416305
94B					
	4 x 2 x 28 AWG	7 x 0.25 mm	Ethernet cable for flexible installation. The cable is resistant to oil and chemicals, and is flame-retardant. Its transmission properties meet CAT5e.	1417333	1416567
94D					
	4 x 2 x 26 AWG	7 x 0.18 m, Twisted pair	Ethernet cable for flexible installation. The cable is oil-resistant to a degree. It is UV-resistant in accordance with UL 1581 Section 1200 and therefore also suitable for outdoor use. The cable's transmission properties meet CAT5e.	1416444	1416334
94E					
	4 x 2 x 23 AWG	Single-strand, Twisted pair	Ethernet cable for fixed installation. The cable is resistant to oil and chemicals, and is flame-retardant. It is also halogen-free and its transmission properties meet CAT6$_A$.	1416460	1416334
94F					
	4 x 2 x 26 AWG	7 x 0.16 mm, Twisted pair	Ethernet cable for flexible installation. The cable is resistant to oil and chemicals, and is flame-retardant. It is also halogen-free and its transmission properties meet CAT6$_A$.	1417359	1416347

Assembled cables for PROFINET networks

	Cable structure	Conductor structure/ signal line	Description	By the meter	100 m ring
93A					
	4 x 22 AWG	Single-strand	PROFINET cable for fixed installation. The cable is flame-retardant and its transmission properties meet CAT5e.	1416486	1416392
93B					
	4 x 22 AWG	7 x 0.25 mm	PROFINET cable for flexible installation. The cable is oil-resistant to a degree. It is UV-resistant in accordance with UL 1581 Section 1200 and therefore also suitable for outdoor use. The cable's transmission properties meet CAT5e.	1417362	1416389
93C					
	4 x 22 AWG	7 x 0.25 mm	PROFINET cable for use in drag chains. The cable is halogen-free and oil resistant. It is UV-resistant and therefore suitable for outdoor use. The cable's transmission properties meet CAT5e.	1417491	1416376
93R					
	4 x 22 AWG	19 x 0.15 mm	PROFINET cable for robot applications. The cable is oil-resistant to a degree. It is UV-resistant in accordance with UL 1581 Section 1200 and therefore also suitable for outdoor use. The cable's transmission properties meet CAT5e.	1417388	1416363
937					
	4 x 22 AWG	7 x 0.25 mm	PROFINET cable for railway applications. The cable is oil-resistant. It meets fire safety standard BS 6853. The cable's transmission properties meet CAT5e.	1402687	1416363

Products

FO-based data cabling for networks and fieldbuses

High transmission speed, low attenuation, resistant to electromagnetic interference:
FO cables are among the modern transmission media for industrial systems and infrastructure applications. Whatever the fiber type or interface – you can choose the right connection technology from our extensive portfolio.

CANopen

DeviceNet

EtherCAT

Ethernet

EtherNet/IP

INTERBUS

Modbus

PROFIBUS

PROFINET

sercos
the automation bus

Wide choice of versions

Wide choice of versions from SC-RJ, LC, SC, F-SMA to ST, plus POF, PCF, and GOF fiber types.

Comprehensive range of cables

Extensive range of cables for all applications, networks, and standard interfaces.

Fast assembly

Fast assembly in the field using professional tools.

Your advantages

- ⊘ Transmission speeds of up to 40 Gbps

- ⊘ Solutions for IP20, IP65/IP67, and IP68

- ⊘ For all common fiber types

- ⊘ Maximum protection against the effects of EMI and ESD

- ⊘ The right fiber type can be selected for your application (POF, PCF, GOF multimode, GOF singlemode)
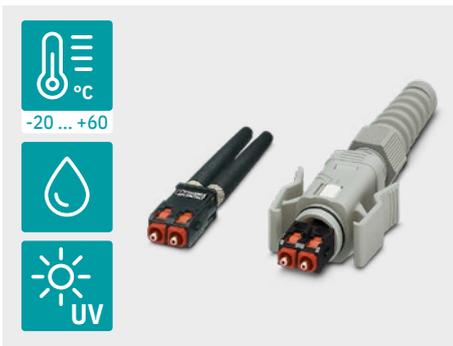

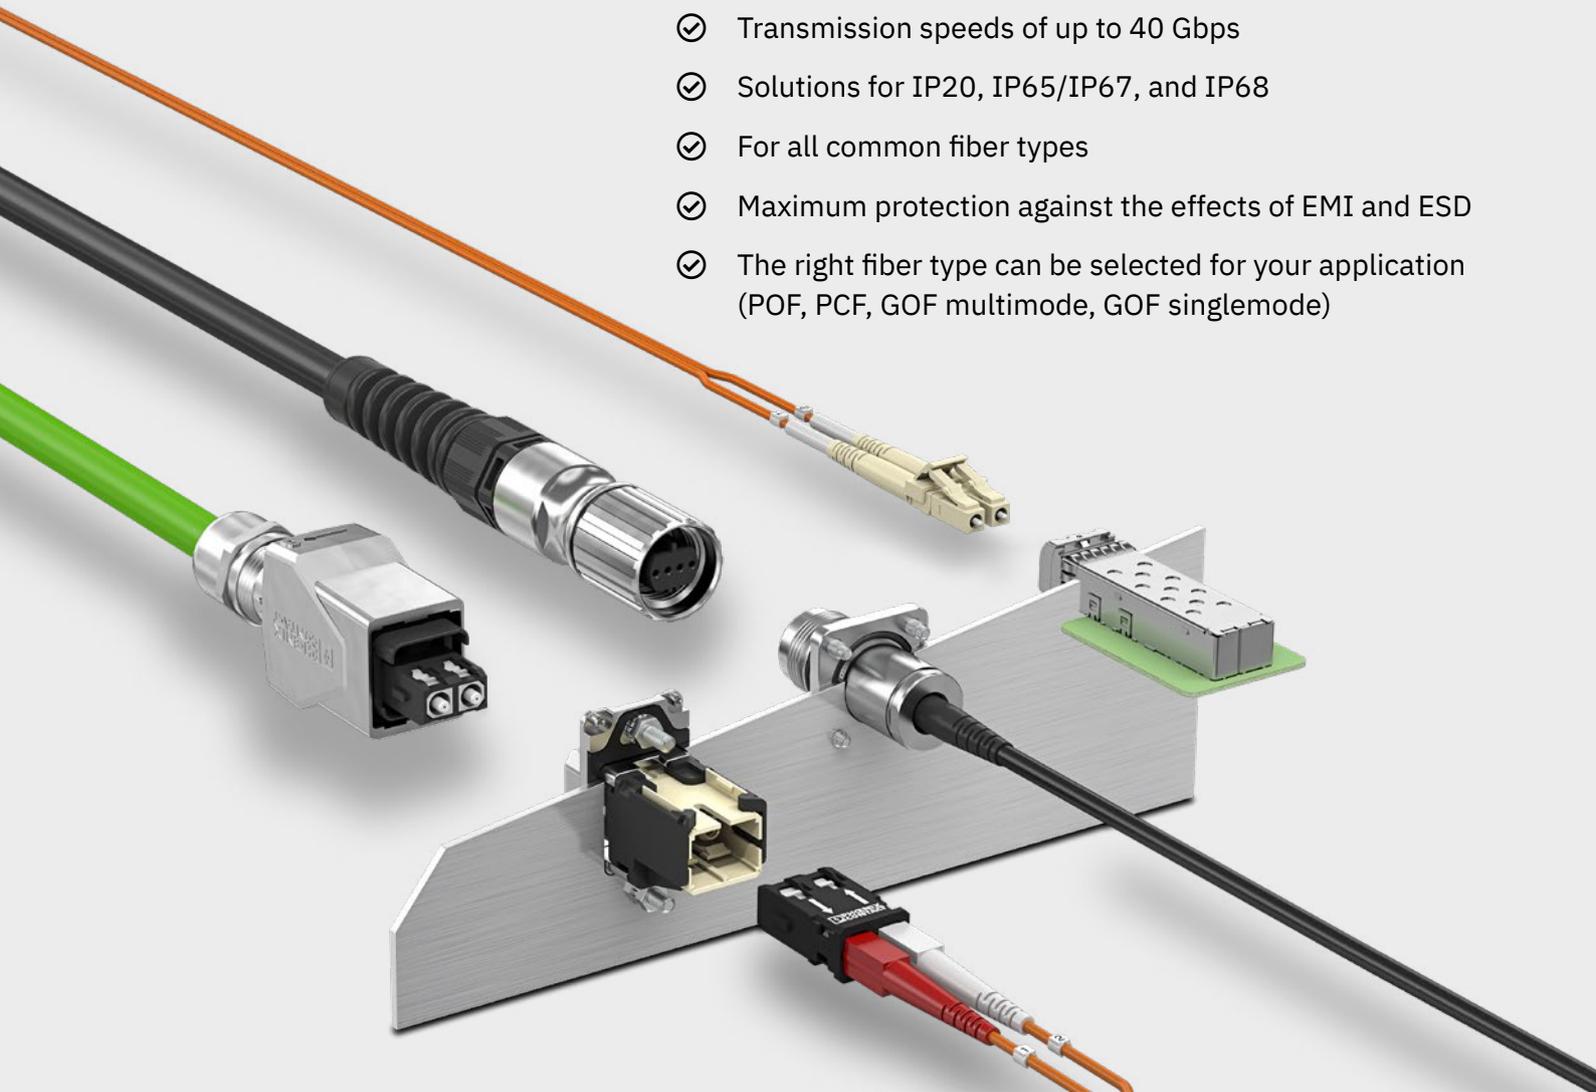

Reliable protection

Reliable protection against extreme temperatures, liquids, and UV light.

High-quality patch cables

Large selection of patch cable versions for all typical connection methods.

High packing density

High packing density and large splice comb in splice boxes for DIN rail and 19" mounting.

SC-RJ, V14, IP65/IP67

	Cable outlet	Material	Connection method	Data rate	Specification	Item no.

Your partner for ICS security and industrial communication

You do not need to be an expert. We provide you with much more than just products. We also provide you with support whenever you need it. Phoenix Contact provides a comprehensive service portfolio for ICS security and industrial communication over the entire system life cycle, with a focus on availability, integrity, and confidentiality. We not only provide support over the phone or by email, but also directly on site, if you so desire.

Web code: #1557

Our range of services at a glance

Assessment and planning

Together, we will inspect your system and analyze your individual threat and risk situation, documentation, and processes. You will receive a detailed report of vulnerabilities, recommended actions, and a list of measures required in order to provide standard protection for your system.

Based on the industry standard, we will develop solutions and concepts that are tailored to you. Whether you need failsafe network structures, concepts for the protection or remote maintenance of your machinery, or high-performance wireless networks: we will find the right solution for you.

Implementation

We implement your security and network requirements for you, so you can continue to focus on your actual core competencies. We do this by providing assistance on site or handling complete subtasks, which we will implement according to the relevant specifications.

After our analysis has been carried out, we will optimize the communication relationships in your network to increase performance and availability.

Maintenance and support

To ensure the availability of your system, updates must be installed on a regular basis, the firewall rules adapted, and messages evaluated. As a user, you have minimal administrative work. In addition, you will satisfy the burden of proof for implementing measures in accordance with state-of-the-art technology.

We focus on eliminating anomalies, such as incorrect device configurations and any security vulnerabilities that are identified.

If you have any questions about ICS security and industrial communication, do not hesitate to contact us.

Seminars

Information security concerns all employees in your company. Through security-conscious and responsible behavior, employees can avoid failures and damage, and contribute to the success of the company.

We provide awareness instructions and practical trainings that are tailored to your individual requirements.

Open communication with customers and partners worldwide

Phoenix Contact is a global market leader based in Germany. We are known for producing forward-thinking products and solutions for the comprehensive electrification, networking, and automation of all sectors of the economy and infrastructure. With a global network, we maintain close relationships with our customers, something we believe is essential for our common success.
